Support for adding text animations. Optimize the editing module. Current update: Video supports 'Mirror Flip' and 'Reset' functions. Love the app until this latest update. Please fix the automatic zoom (I DO NOT WANT IT) and crash. It is unusable. I want my money back as I pay for the Premium VIP version. UPDATE: Automatic zoom is fixed. I'm happy again. This is not a perfect professional video editing app that costs, so people don't expect it to be. The paid VIP membership summlasts very well. Good enough for most needs. You just need to learn to navigate it. The best part is the Extract Ingeof music function. I do training videos. I record several takes on the iPhone, choose the best recording, edit that in Viva VIP background music from ANOTHER video on my phone, tweak the music timeline, and voila, it looks and sounds like a flawless take. The processing/playback of the final video is decent. Occasionally, the app crashes, so I've learned to use saving and quitting often to protect my work from final rendering. I just started playing with the greenscreen function. It's rudimentary, but that's okay at the moment. I don't expect all this heavy CPU processing to be perfect right away. The more an app works, the more complicated it is to process. So again people, you have to pay a small fee to get these features, and don't expect this to work the same as software that costs a subscription on your desktop. However, it is the best fast video editing app for non-professionals. I hope the developers keep up the good work. Thank you very much. So I downloaded almost every video editing app in the AppStore and many of them came with free trials like this. I tried almost everyone. Even the professionally polished-looking apps that are more for pretty much exactly the same thing you can do here. I bought the year VIP subscription and I don't regret it. I use other apps in conjunction with VivaVideo. The things you can do when you try to learn them are pretty awesome. There are some limitations when it comes to using it on your phone, but partly due to screen size, but once I have my iPad with this app, I have a lot of fun and the effects are super cool. I would like more of them to be added. And maybe some video filters that have reflection or even a kaleidoscope view! I want a better way, way, or find music to add the clips, but it's not bad at all in the stage it is in now. If you're looking for a review from someone who is meticulous about their purchases to get you to move forward with the app/subscription, that's what it will be. Happy editing. Hey, I use VivaVideo to edit my videos, but a question and problems. 1. Could we make it possible to add advanced speed effects to videos? 2. It crashes the app when I buy something. For example, I asked my dad to buy the subscription and he said yes and it crashed the app. I don't like it when it crashes the app, but it could be because he tried to buy it and abruptly crashed the app. 3. When I add music and videos, they don't save at all. Maybe I'm a little nit picky about this, but when this app shuts down, it shuts down every quarter of a second 4. Always crashes when I try to open it. 5. There must be animated margins, music and photos. 6. There should be an option to add sounds to videos. 7. It should be an option for you to crop a video. 8. There should be an option to trim videos. 9. There must be an option to add animated text to videos. 10. There is an option to share a video. 11. There should be a way to increase or decrease intensity and contrast. Developer Website App Support Privacy Policy VivaVideo Pro Apk is the best Android app for video editing and you can download the latest version for free. [100% Free, Unlocked, Mod] VivaVideo Pro Apk is the best Android app for video editing and you can download the latest version for free.
